

Rectifiers

In Brief . . .

Continuing investment in research and development for discrete products has created a rectifier manufacturing facility that matches the precision and versatility of the most advanced integrated circuits. As a result, Motorola's silicon rectifiers span all high tech applications with quality levels capable of passing the most stringent environmental tests . . . including those for automotive under-hood applications. Additionally, the introduction of Motorola's first generation GaAs power devices is pushing the limits of today's rectifier technology.

Product Highlights:

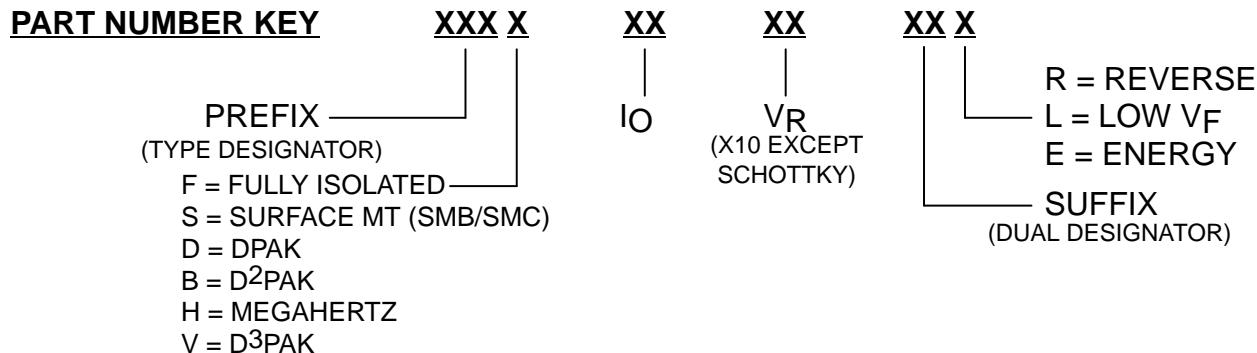

- GaAs Rectifiers Power Manager™ with incredibly soft and hyperfast (<15 ns) reverse recovery are ideally suited for high frequency power supplies, free wheeling diodes, and as polarity protection diodes.
- Surface Mount Devices — A major thrust has been the development and introduction of a broad range of power rectifiers, Schottky and Ultrafast, 1/2 amp to 25 amp, 15 to 600 volts.
- Application Specific Rectifiers —
 - MEGAHERTZ™ series for high frequency power supplies and power factor correction.
 - Schottky rectifiers having lower forward voltage drop (0.3 to 0.6 volts) for use in low voltage SMPS outputs and as "OR"ing diodes.
 - Automotive transient suppressors.
- Ultrafast rectifiers having reverse recovery times as low as 25 ns to complement the Schottky devices for higher voltage requirements in high frequency applications.
- A wide variety of package options to match virtually any potential requirement.

The rectifier selector section that follows has generally been arranged by package and technology. The individual tables have been sorted by voltage and current with the package types for the devices listed shown above each table. The Application Specific Rectifiers are also included in their respective tables.

Motorola's commitment to Six-Sigma is showing its worth. Refined processes no longer produce fallout as such and therefore only **Motorola Preferred Devices** are listed in the tables. The non-preferred devices will continue to be offered, but customers are encouraged to begin designing using the preferred types.

RECTIFIER NUMBERING SYSTEM

PREFIX KEY	MUR = MOTOROLA ULTRA FAST RECTIFIER
	MBR = MOTOROLA (SCHOTTKY) BARRIER RECTIFIER
	MGR = MOTOROLA GaAs RECTIFIER
	MR = MOTOROLA STANDARD & FAST RECOVERY

SUFFIX KEY	CT = CENTER TAP (DUAL) TO-220, TO-3, POWERTAP II
	PT = CENTER TAP (DUAL) TO-218 PACKAGE
	WT = CENTER TAP (DUAL) TO-247 / TO-3P

EXAMPLE:	MUR	30	20	WT
	MOTOROLA ULTRAFAST	30 AMP	200 V	CENTER TAP (DUAL) TO-247
EXAMPLE:	MBR	30	45	WT
	MOTOROLA SCHOTTKY	30 AMP	45 V	CENTER TAP (DUAL) TO-247

Application Specific Rectifiers

The focus for Rectifier Products continues to be on Schottky and Ultrafast technologies, with process and packaging improvements to achieve greater efficiency in high frequency switching power supplies, and high current

mainframe supplies. Our new product thrust is intended to be more "application specific" than in the past, while continuing to strive for broad market acceptance.

Table 1. Low V_F Schottky Rectifiers

State of the art geometry is used in low V_F Schottky devices for improved efficiency in low voltage, high frequency switching power supplies, free-wheeling diodes, polarity protection diodes and "OR"ing diodes.

Device	I _O Amps	V _{RRM} (Volts)	V _F @ Rated I _O and Temperature Volts (Max)	I _R @ Rated V _{RRM} mAmps (Max)	Package

MBRP60035CTL	600	35	0.50	10	POWER TAP II

Table 2. MEGAHERTZ Rectifiers

MEGAHERTZ Series — This group of ultrafast rectifiers is designed to provide improved efficiency in very high frequency switching power supplies and for use in power factor correction circuits.

Device	I _O Amps	V _{RRM} (Volts)	Maximum		t _{rr} (Nanosecond)
			V _F @ Rated I _O and Temp. (Volts)	I _R @ Rated V _{RRM} (mAmps)	
MURH840CT/MURHB840CT	8	400	1.7	0.01	28
MURH860CT	8	600	2.0	0.01	28

Table 3. SCANSWITCH Rectifiers

These ultrafast rectifiers are designed for improved performance in very high resolution monitors and work stations where forward recovery time (t_{fr}) and high voltage (1200–1500 volts) are primary considerations.

Device	I _O Amps	V _{RRM} (Volts)	Maximum		V _{RFM} (6) (Volts)
			t _{fr} (Nanoseconds)	t _{rr} (Nanoseconds)	
MUR880E	8	800	—	75	—
MUR10120E	10	1200	175	175	14
MUR10150E	10	1500	175	175	16

Table 4. Automotive Transient Suppressors

Automotive transient suppressors are designed for protection against over-voltage conditions in the auto electrical system including the "LOAD DUMP" phenomenon that occurs when the battery open circuits while the car is running.

Device	I _O Amps	V _{RRM} (Volts)	V _(BR) (Volts)	I _{RSM} ⁽⁷⁾ (Amps)	T (°C)
MR2535L/MR2535S	35	20	24–32	110	175

⁽⁶⁾V_{RFM} = Maximum Transient Overshoot Voltage.

⁽⁷⁾Time constant = 10 ms, Duty Cycle ≤ 1%, T_C = 25°C.

Devices listed in bold, italic are Motorola preferred devices.

SWITCHMODE™ Rectifiers

Schottky power rectifiers with the high speed and low forward voltage drop characteristic of Schottky's metal/silicon junctions are produced with ruggedness and temperature performance comparable to silicon-junction rectifiers. Ideal for use in low-voltage, high-frequency power supplies, and as very fast clamping diodes, these devices feature switching times less than 10 ns, and are offered in current ranges from 0.5 to 600 amperes, and reverse voltages to 200 volts.

In some current ranges, devices are available with junction temperature specifications of 125°C, 150°C and 175°C. Devices with higher T_J ratings can have significantly lower leakage currents, but higher forward-voltage specifications. These parameter tradeoffs should be considered when selecting devices for applications that can be satisfied by more than one device type number.

All devices are connected cathode-to-case or cathode-to-heatsink, where applicable. Contact your Motorola representative for more information.

There are many other standard features in Motorola Schottky rectifiers that give added performance and reliability.

1. GUARDRINGS were pioneered by Motorola and are included in all Schottky die for reverse voltage stress protection from high rates of dv/dt to virtually eliminate the need for snubber networks. The guardring also operates like a zener and avalanches when subjected to voltage transients.

2. MOLYBDENUM DISCS on both sides of the die minimize fatigue from power cycling in all metal products. Plastic encapsulated devices have a special solder formulation for the same purpose.

3. QUALITY CONTROL monitors all critical fabrication operations and performs selected stress tests to assure constant processes. Motorola's commitment to six sigma has provided significant quality improvement.

(2) V_{RRM} unless noted

(3) V_{RRM}, T_J = 100°C unless noted

(9) Package Size: 0.120" max diameter by 0.260" length.

(10) Must be derated for reverse power dissipation. See data sheet.

(11) Overvoltage Transient Suppressor: 24–32 volts avalanche voltage.

Devices listed in bold, italic are Motorola preferred devices.

GaAs Rectifiers Power Manager™

For use in state-of-the-art high power density DC-DC converters and high frequency power supplies, GaAs power rectifiers have several unique characteristics that make them superior to Si-based devices. In particular, GaAs devices are acclaimed for their hyperfast and soft reverse recovery characteristics with low stored charge. Also, the device parameters are stable over a wide temperature range.

GaAs devices as drop-in replacements for Si may eliminate the need for a snubber network or allow for a significant reduction in network size. Performance improvements can therefore be achieved while reducing circuit size (increasing power density), decreasing EMI, and enhancing overall system efficiency.

Table 16. TO-220 and D²PAK GaAs Rectifiers Power Manager™
